COVID-19

VACCINE

D&V

March 2021
Drawn from Valor

DOES IT CAUSE COVID?

Nope!

- You might have a sore arm or flu symptoms that go away in a few days, but no COVID.

HOW DOES IT WORK?

- Pfizer and Moderna are **mRNA vaccines** and Janssen is an **adenovirus vector vaccine**. These vaccines get messages into the body and cannot make you sick.

WERE ANY CORNERS CUT?

Nope!

Thanks to scientific advancements and population of infected, testing could be done more efficiently.

your safety has always been taken into account

IF I'VE ALREADY HAD COVID SHOULD I STILL GET VACCINATED?

Yes!

Because experts don't know yet how long you're protected after getting COVID, it's best to get the vaccine.

WHAT IS HERD IMMUNITY?

When enough people become immune to a disease and spreading becomes less likely.

HOW MANY NEED TO BE VACCINATED TO REACH HERD IMMUNITY?

70-80%

WHAT DOES EFFICACY MEAN?

- 95% of the time the vaccine prevents symptoms of COVID but 5% it does not.
- It's still 100% effective in preventing hospitalization.**

95%

HOW SOON AFTER GETTING VACCINATED WILL I BE IMMUNE?

10-14 days

CAN I STILL INFECT SOMEONE AFTER I'VE BEEN VACCINATED?

Maybe, although you might not be sick, you can be infected asymptomatically (you can carry the virus without showing symptoms and pass it to someone else) - **so continue to wear a mask.**

WILL THIS VACCINE PROTECT ME FROM FUTURE STRAINS?

Yep!

Although new strains may be easier to spread, this vaccine will still work well against it. Simple booster shots may be needed in the future.

WHEN CAN MY KIDS GET VACCINATED?

After clinical trials!
